Operating Systems – Week 2 Project Report

Student Name: Rani Kumari **Roll No.:** B25BS1270

Task 1 – Terminal Report

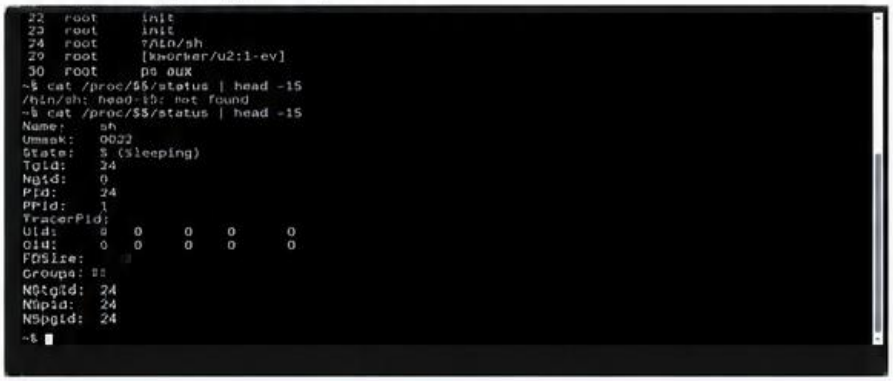

1. Command: ps aux

Observation:

The ps aux command displays the processes currently running in the Buildroot system. It shows information such as the process ID (PID), user, memory usage, process status and command associated with each process.

2. Command: cat /proc/$$/status | head -15

Observation:

The command displays status information about the current shell process. The output shows that the shell has PID 24, its parent process ID is 1, its state is sleeping, and it is running with root user and group IDs.

3. Command: ps f

Observation:

The ps f command displays the currently running processes in a process-oriented format. It helps identify the processes and their parent-child relationships in the Buildroot system.

4. Command: ps aux | grep ash | wc -l

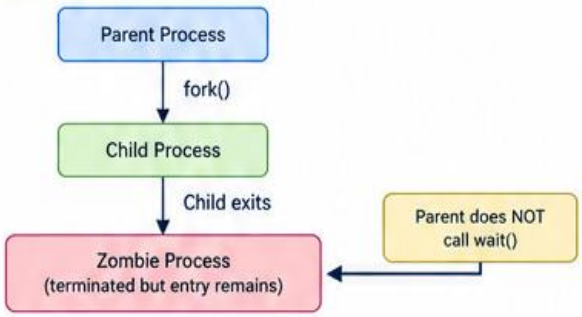

Observation:

The command searches the process list for entries containing ash and counts the matching lines. In this Buildroot environment, only one shell process returned the Buildroot system. the filtered output.

Task 2 – Process Diagrams

1. Zombie Process

2. Orphan Process
